

# information technology consulting

In today's hyper-competitive business world, the effective use of information technology is unquestionably a critical element of every successful organization. When planned and deployed correctly, information technology provides the strategic edge a company needs to meet customer expectations, outmaneuver the competition and protect or expand market share.

Veris has the capacity to handle the following information technology needs:

- IT management consulting, including part-time CIO/CTO services, transitional information technology management, security and network assessments and disaster recovery solutions
- network and application support, including day-to-day network administration, helpdesk support, security strategies, and telecommuting solutions
- database consulting, including database design, maintenance, programming and modeling
- web development and consulting, including site design, development, hosting, maintenance and custom application development

Our professionals have extensive experience serving a wide range of organizations that vary in size, nature and complexity. Our team has a broad background and have held all of the relevant technology positions, including network engineer and administrator, database administrator, web programmer, systems architect, technical project manager and CTO, to enable us to serve your entire organization's IT needs.

As a multifaceted outsourcing firm, we offer a full scope of customized IT services to analyze your current IT structure and functions and identify potential for cost-effective outsourcing alternatives. In addition to ensuring that your information technology is capable of providing the maximum strategic benefit to your operations, an outsourcing arrangement with Veris can enable your staff to stay focused on its core mission.
